PasarSim

Simulate before you open.

Indonesia's first hyperlocal market simulation platform for UMKM business owners.

The Problem

Gut Feel

No data. High risk. Most common approach.

Manual Research

Weeks of effort. Still incomplete. Deeply biased.

Enterprise Firms

Minimum Rp 50–100M per study. Priced for corporations.

65.5M UMKMs contribute 61% of Indonesia's GDP — yet none have affordable, localized pre-launch simulation.

The Solution

01

Input Concept

Business owner describes location and offering

02

Run Simulation

Against community-validated cluster dataset

03

Get Intelligence

Structured report before signing lease

What Users Receive

Sentiment Analysis

Positive, neutral, skeptical percentages

Willingness-to-Pay

Price range and resistance points

Product Variants

Best product variants for certain cluster

Foot Traffic Signals

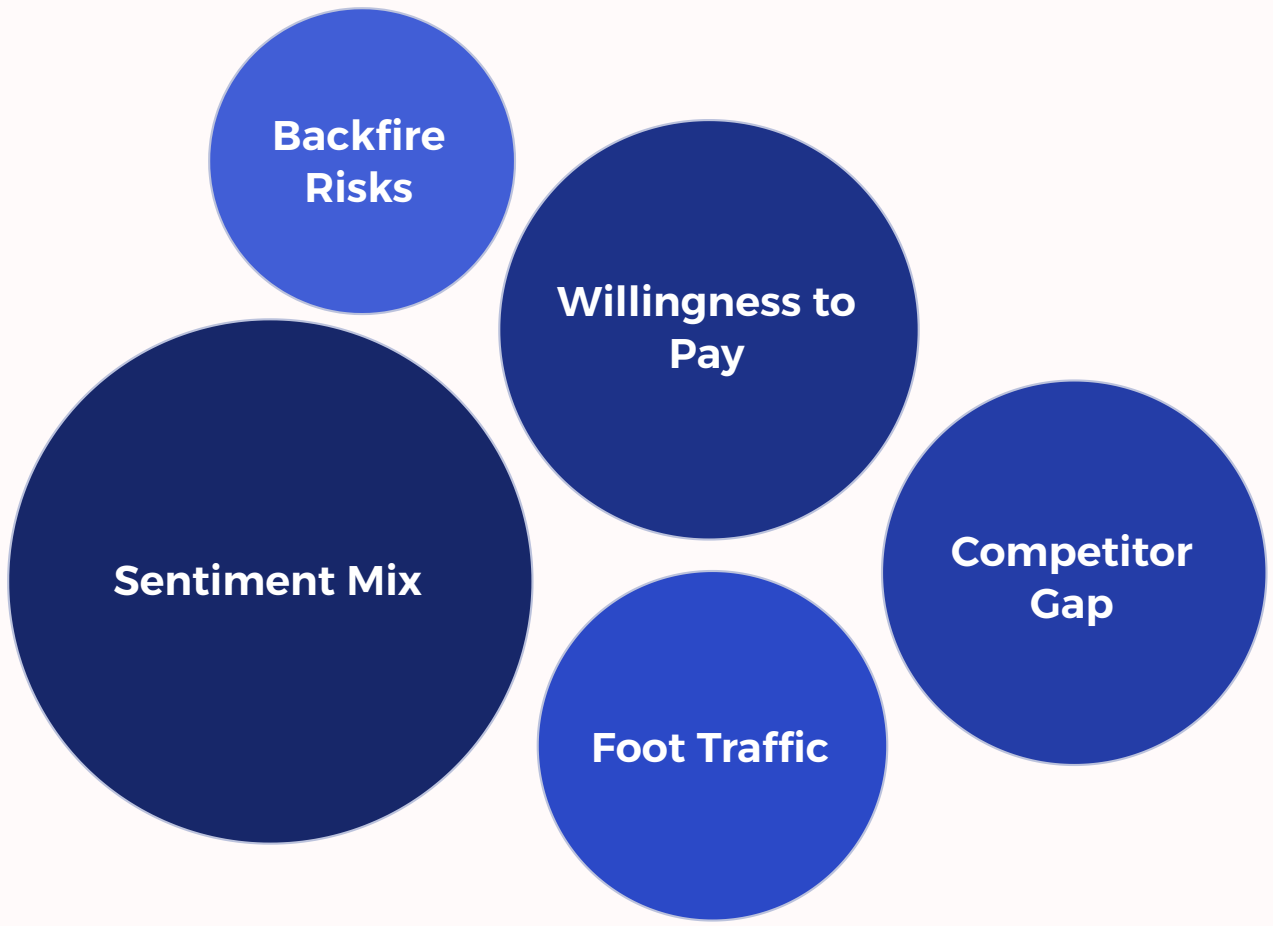
Demand by time and day patterns

Backfire Warnings

Elements likely to generate negative reactions

Recommendations

Actionable adjustments to positioning



How Clusters Are Built

Community Manager Model

PIC recruited per cluster. Standardized forms distributed. QA validation by internal team. Payment: Rp 1.5M–3M + quality bonus.

Self-Initialized Proposal

Anyone submits cluster proposal. Approved within 5 days. Upfront grant Rp 500K–1.5M. Full payment Rp 2M–5M upon validation.

Revenue Model

Pay-As-You-Go

Rp 75,000 per simulation credit

Valid 12 months

Explorer

Rp 150K/month

3 simulations

<48 hours

Builder

Rp 350K/month

10 simulations

<24 hours

Pro

Rp 750K/month

Unlimited

<8 hours + priority

One simulation preventing a bad location decision costing Rp 50M means Rp 75K pays back 660×.

Target Market

Primary User

Indonesian UMKM owner in mid-to-high segment — F&B, retail, lifestyle. Planning or expanding physical location.

Writing business plan. Choosing between sites.

Geography & Category

Wedge: Jabodetabek suburban corridors — Gading Serpong, BSD, Bekasi Timur, Depok.

Category: F&B (café, restaurant, cloud kitchen).

Competitive Landscape

Dimension	Gut Feel	Enterprise	ChatGPT	PasarSim
Indonesian local data	Partial	Yes	No	**Yes**
UMKM-affordable	Yes (time cost)	No	Partial	**Yes**
Speed of insight	Weeks	Weeks	Seconds (generic)	**<24 hrs**
Hyperlocal cluster data	No	Sometimes	No	**Yes**
Behavioral validation	No	Yes	No	**Yes**

Key differentiator: The moat isn't the AI — it's the proprietary Indonesian cluster dataset.

Market Evidence

65.5M

UMKMs

61% of Indonesia's GDP (BPS, 2023)

$140B

Market Research

Global industry — enterprise priced (IBISWorld, 2024)

15K

Artificial Societies

Users at $40/month — validated globally

Roadmap

1

Q2 2026

Validate pain. 10 UMKM interviews. 5 manual simulations delivered & paid.

2

Q3 2026

Launch first cluster. 3 Jabodetabek F&B clusters live. 50 paying users.

3

Q4 2026

Prove platform. Self-service web app. 200 simulations. 15 clusters.

4

Q1 2027

Scale network. Rp 50M MRR. First agency Pro account. 50+ clusters.
